Advanced Reporting answers security and compliance posture questions quickly

Visualize and track the progress of your software threat modeling, secure development, and compliance preparation.

Collecting security and compliance data for your software portfolio can be slow and cumbersome, leading to delayed decision-making and stakeholder misalignment.

New Advanced Reporting in SD Elements provides self-service analytics and data visualization so you can retrieve data quickly and drive decisions faster. With easy access to data insights delivered via highly customizable reports and dashboards, you can share important metrics and KPIs in an easy-to-understand format for all stakeholders. Fully harness your investment in SD Elements, a single platform for developer-centric threat modeling, secure development, and compliance.

> "
> Manual reporting of application compliance against specific security tasks such as pentest, SAST, and DAST burdened our teams. Thanks to Advanced Reporting, I was able to pull up the right data instantly, saving us a lot of time and angst. **This new capability will exponentially help get buy-in from other groups and business-minded product owners.**

SecurityCompass

SD Elements Advanced Reporting Capabilities

Simplify analytics

Start with pre-built report templates and dashboards, then modify them to meet your needs, or build your own reports and dashboards and assemble data about the security and compliance posture of Projects within your organization quickly. Access and combine data from over 30 objects, such as Applications, Activities, and Tasks from your SD Elements instance, then visualize data on the fly. Set and forget relative date filters to ensure your data set updates dynamically.

Take data-driven action

Empower development, security, and operations teams to swiftly diagnose and prioritize issues and actions within their own Projects or across the software portfolio. Leverage Advanced Reports, Dashboards, and other reporting features in SD Elements to gain a complete picture of your software security and compliance posture.

Integrate data insights

Take advantage of API capabilities to export data programmatically and integrate SD Elements data into external reporting systems.

Start using Advanced Reports and Dashboards today to get the most out of your SD Elements investment.

> "
> Advanced Reporting enables our DevSecOps team to improve our end-to-end workflow significantly and integrate reporting into our security program seamlessly. The ease of producing reports within SD Elements has increased efficiency and time savings, ultimately freeing up our time to focus on providing resilient security solutions to our organization.
