Security Compass

Committed to your success.

We have seen firsthand how important it is to balance people, process and technology for the successful rollout of a security training program. Without these resources, organizations may find themselves questioning the value of their training investments as they deal with low adoption, learner overwhelm and disengagement with training content. To close the secure development skill gap, organizations need the appropriate mix of people and processes to be able to leverage their technology and content and realize the value of investing in security training.

The right support for where you are - and where you are going. All companies are at different stages of security training maturity. Whether you are early in your journey and are just getting started with a baseline of security knowledge, or farther along and focused on enabling champions and upskilling beyond foundational knowledge, Security Compass offers support plans right-sized to the current needs and future training goals of your organization, whether you are a Hosted or Export Customer.

BASE

Our Base Plan includes initial implementation support and regular technical support throughout the year. It is best suited for customers that have the capacity and skills to self-serve for reporting and measuring the business impact of their training programs themselves.

STANDARD

The Standard Plan includes the Base support activities plus additional support to define training program goals, content and a one-time orientation for rollout.

PREMIUM

Our Premium Plan includes the Base and Standard support activities, plus additional support during the Program Rollout and with creating a Stakeholder Incentive Strategy to increase engagement. This Plan is ideal for customers that require assistance with a business impact analysis of their programs, and require custom and automated reports via scheduled email.

SecurityCompass
