

Committed to your success.

We have seen first hand how important a well-thought-out implementation plan and ongoing support are to the rollout of a successful security plan. Unlike many security solution companies, Security Compass doesn't just sell you software and walk away. As pioneers in Application Security, we bring over 20 years of expertise and best practice processes to ensure your plan is set up for widespread adoption and long-term sustainable success.

The right support for where you are - and where you are going.

All companies are at different stages of AppSec plan maturity. Some may be just getting their security plan off the ground and are looking to self-serve their implementation and training, while others may have more mature plans that are increasing in complexity as they grow and require more in-depth consulting, services, training, and support. Security Compass offers service and support plans right-sized to the current needs and future goals of your organization.

BASE

Our Base plan is a great fit for midsize companies looking for an out-of-the-box plan with support from our team on rollout plans, business reviews, plan management consultations, and training.

STANDARD

For our larger SD Elements customers our Standard plan provides additional support including instructor-led training, reporting, and additional resources to support plan rollout.

PREMIUM

Large customers with complex needs will benefit from our Premium plan offering which includes DevSecOps design consulting services, advanced automation and API supports, and stakeholder incentive plan services.

Choosing The Right Fit

	BASE	STANDARD	PREMIUM
I have SD Elements and I'm looking for support to get started but execute a self-service rollout			
We would benefit from guided support with scaling our security plan			
We are a dynamic organization that experiences personnel changes and would benefit from instructor-led training as needed			
We have a large mature plan and want advanced automation options to allow for greater scaling and adoption			
We are managing cross-functional change management at scale and would benefit from a plan that gets development teams introduced and excited about security "shifting left"			
BEST FOR	Mid-size SaaS technology companies with 10-25 applications	Larger companies with 25-500 projects and more than one development team	Large companies with 500+ projects, complex requirements and multiple development teams

About Security Compass

Security Compass, a pioneer in Application Security, enables organizations to shift left and build secure applications by design, integrated directly with existing DevSecOps tools and workflows. Its flagship product, SD Elements, helps organizations accelerate software time-to-market and reduce cyber risks by taking an automated, developer-centric approach to threat modeling, secure development, and compliance. Security Compass is a trusted eLearning solutions provider, offering a full suite of on-demand, role-based courses that cover various programming languages, cloud solutions, and IaC tools.
