Secure Development Training by the Secure Development Experts.

Companies face an increased risk of security breaches in their products exacerbated by their teams' lack of skill and awareness in secure development and deployment practices.

Security Compass delivers best-practice, role-based, accredited eLearning solutions that go beyond secure coding to accelerate compliance and empower your teams to build and release secure products without impacting the speed of delivery.

Approximately 50 courses for both language-based and role-based learning

Improve the security skills of your team across the board.

From security champions looking for a quick refresher without interrupting their workflow to junior developers needing a foundational primer, our eLearningsolutions meet your team where they are in their knowledge and learning styles, ensuring they can apply their learnings to their day-to-day jobs successfully. We have approximately 50 courses covering topics including:

- Defending AWS, .NET, Angular, Java, and more
- DevSecOps Fundamentals and DevSecOps for Managers
- Defending Containers, Kubernetes, Docker
- Secure Software Requirements, Design, Testing

Accredited, role-based eLearning solutions.

Our modular, on-demand learning solutions engage your team with programming language and technology-specific role-based training. Security Compass goes beyond theory, providing practical, actionable guidance and code samples to effectively and efficiently upskill your development and DevOps teams. Security Compass is the only secure development eLearning solution accredited by (ISC)², giving your staff valuable professional development opportunities, including earning and sharing Credly badges.

Over 1900 developers certified accredited by (ISC)²

(ISC)²

Reduce business risk and create a culture of security.

With eLearning solutions from Security Compass, you can promote awareness of the regulatory environment and the impact of application security vulnerabilities on your organization. Our engaging, on-demand modules promote a security mindset across all stages of the SDLC and improve collaboration between development and security teams as well as the secure coding skills of your developers.

Enterprise ready.

Security Compass works with companies of all sizes to support on-premise learning with all content available in industry-standard SCORM files for integration into most LMS/eLearning platforms. Tailored learning paths align with corporate learning goals and track and report on employee progress.

Take your developers from good to great by empowering them to write secure code to defend against security threats:

Industry recognized (ISC)² accredited

Language, technology-specific role-based content

Practical, actionable guidance and code samples

Engaging, on-demand, and interactive

Modular, learn at your own pace

About Security Compass

Security Compass, a pioneer in application security, enables organizations to shift left and build secure applications by design, integrated directly with existing DevSecOps tools and workflows. Its flagship product, SD Elements, helps organizations accelerate software time to market and reduce cyber risks by taking an automated, developer-centric approach to threat modeling, secure development, and compliance. Security Compass is the trusted solution provider to leading financial and technology organizations, the U.S. Department of Defense, government agencies, and renowned global brands across multiple industries.
